

**AGRICULTURAL BUFFER**

How wide should the agricultural buffer be?

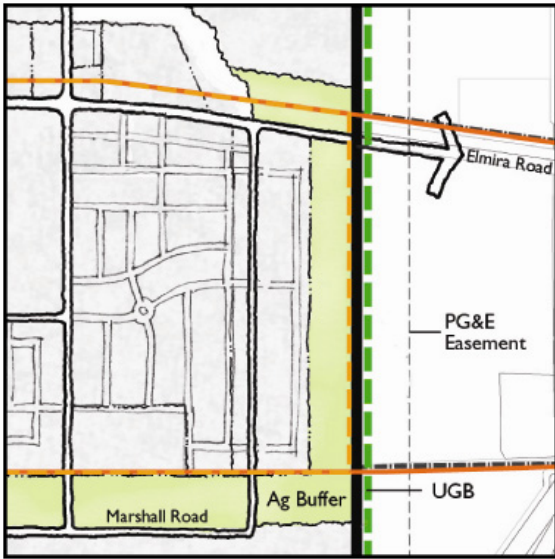

- A. 300 feet - This agricultural buffer width is required within Solano County.
- B. 500 feet - This is the City's current standard.
- C. 700 feet - The current General Plan encourages the City to consider a wider agricultural buffer if development is permitted on the east side of Leisure Town Road.
- D. Other \_\_\_\_\_

Should a buffer be required adjacent to non-residential urban uses such as stores, offices, or warehouses?

- A. Yes, agricultural operations can conflict with commercial uses and a buffer is needed to mitigate potential conflicts.
- B. No, agricultural operations don't conflict with commercial uses and/or a buffer is not needed.
- C. Other \_\_\_\_\_

Where should the agricultural buffer be located?

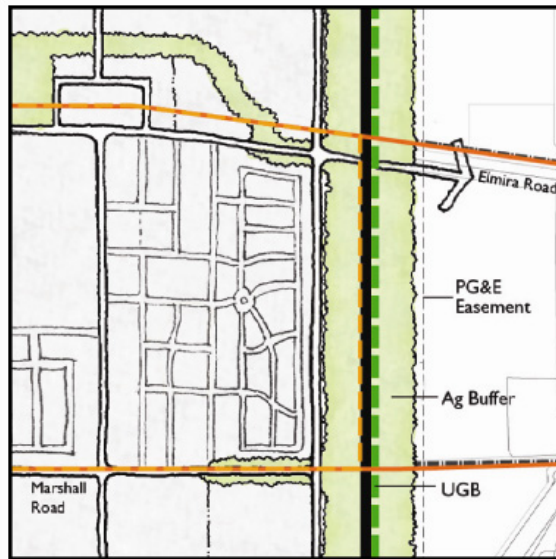

- A. Inside the Urban Growth Boundary (UGB), which would reduce the development potential in the city's East of Leisure Town Road Growth Area and preserve prime agricultural land on the east side of the UGB? This option would also keep the UGB within the City's jurisdiction, rather than the County's, meaning that the City would have control over what uses would be allowed in the buffer, allowing the City to ensure its long-term preservation.
- B. Outside the UGB, which maximizes development potential in the city, reduces the land available for farming, and places the buffer with the County's jurisdiction.
- C. Straddling the UGB evenly.
- D. Straddling the UGB, with more of the buffer inside the UGB.
- E. Straddling the UGB, with more of the buffer outside the UGB.
- F. Other: \_\_\_\_\_
